

Part 1: Design & Sketching

Christoper L and Joaquin Sanchez

- Joaquin
 - going to handle most of the base HTML for the Index and Environments pages.
 - will set up the layout, navigation bar, and include all the images, figures, and captions.
 - will make sure the pages use proper HTML5 structure like header, main, and footer sections.
- Chris
 - will work on the Contacts (Donate) page and build the form with all the inputs, labels, and fieldsets.
 - will make sure the form has the right validation, placeholders, and includes checkboxes and radio buttons.
 - find pictures and information for the sites (just general not too in depth since website CONTENT wont matter too much.)
- Both of us
 - we'll work together on the CSS design like picking colors, adjusting spacing, and keeping everything consistent.
 - test the links, layout, and make sure all the pages flow nicely together.
 - double-check each other's code so it follows and meets the assignment checklist.
 - talk through different ideas and design choices as we go to make sure we both agree on the final look.
